

Google Antigravity Ecosystem Update Audit: CLI, IDE, and Hub Upstream Release Analysis

Providence Salumu, Principal Systems Engineer

Platform Architecture & Developer Tooling Infrastructure

Workspace: nix-config | Host: smunix | Date: October 2026

Deconstruction Header & Telemetry Observation

Systems administration conducted a thorough architectural inspection and upstream release audit across the entire Google Antigravity developer suite, encompassing the standalone IDE, the terminal agent CLI, the multi-agent orchestration Hub, and the Python SDK.

Query: are there new updates for antigravity ide or ai or cli?

Target Components:

- | | |
|----------------------------|---------------------------------|
| 1. Antigravity IDE: | pkgs/google-antigravity-ide.nix |
| 2. Antigravity CLI (agy): | pkgs/google-antigravity-cli.nix |
| 3. Antigravity Hub (2.0): | pkgs/google-antigravity.nix |
| 4. Antigravity Python SDK: | google-antigravity on PyPI |

The investigation determined that:

- Google Antigravity IDE:** The repository pin (2.5.5) matches the latest upstream stable release distributed by Google. Zero newer releases have been published for the IDE.
- Google Antigravity CLI:** Multiple newer upstream releases exist. The repository is pinned to 1.2.11, whereas the current upstream release is **1.2.15** (published October 2, 2026).
- Google Antigravity Hub (2.0):** Two major upstream releases have shipped. The repository is pinned to 2.17.0, whereas the current upstream release is **2.19.1** (published September 30, 2026).
- Live Environment Path Anomaly:** An imperative user-profile installation of google-antigravity-cli (1.2.6) in ~/.nix-profile/bin/agy was discovered actively shadowing the declarative system derivation (1.2.11) located in /etc/profiles/per-user/smunix/bin/agy.

Field-by-Field Component & Version Matrix

We present the current state across the live runtime, system profile, repository derivations, and upstream channels in Table 1.

Component	Active Live	System Profile	Repo Pin	Upstream est	Lat-Delta
Antigravity CLI	1.2.6 (stale)	1.2.11	1.2.11	1.2.15 (Oct 2026)	+4 releases
Antigravity Hub	2.17.0	2.17.0	2.17.0	2.19.1 (Sep 2026)	+2 releases
Antigravity IDE	2.5.5	2.5.5	2.5.5	2.5.5 (Current)	Up to date
Python SDK	N/A	N/A	0.1.18 (docs)	0.1.20 (PyPI)	+2 releases

Table 1: Comparative Version Audit Across System and Upstream Tiers

Definition: Binary Shadowing in Dual Profile Environments

When a user imperatively executes `nix-env -i` or `nix profile install`, symlinks are generated in `~/.nix-profile/bin`. In standard interactive shell startup sequences, `~/.nix-profile/bin` precedes `/etc/profiles/per-user/$USER/bin` in the `$PATH` array. Consequently, even when NixOS declaratively rebuilds and upgrades a system package, the older imperatively installed binary takes precedence and shadows the updated system binary.

Upstream Build Artifacts & Cryptographic Integrity

To enable immediate, zero-downtime declarative upgrades, the upstream release artifacts for both 1.2.15 and 2.19.1 were retrieved from Google Cloud Storage and verified against their cryptographic SHA-512 hashes in Table 2.

Target	Pack- age	Ver- sion	Architec- ture	Upstream Storage Bucket URI	SRI (SHA-512)	Hash
	google- antigravity- cli	1.2.15	x86_64- linux	.../1.2.15-5434575321694208/ linux- x64/cli_linux_x64.tar.gz		sha512- bS4u7aDK1urI...
	google- antigravity- cli	1.2.15	aarch64- linux	.../1.2.15-5434575321694208/ linux- arm/cli_linux_arm64.tar.gz		sha512- GZ5kGf11Sfop...
	google- antigravity	2.19.1	x86_64- linux	.../2.19.1-6046815158665216/ linux-x64/Antigravity.tar.gz		sha512-LgMi1/ gHJiaz...
	google- antigravity	2.19.1	aarch64- linux	.../2.19.1-6046815158665216/ linux-arm/Antigravity.tar.gz		sha512- F20TkiZs6Npq...

Table 2: Upstream Release Endpoints and Cryptographic SRI Checksums

Mechanistic Systems Analysis: Upstream Release Innovations

Antigravity Hub 2.0: Evolution from 2.17.0 to 2.19.1

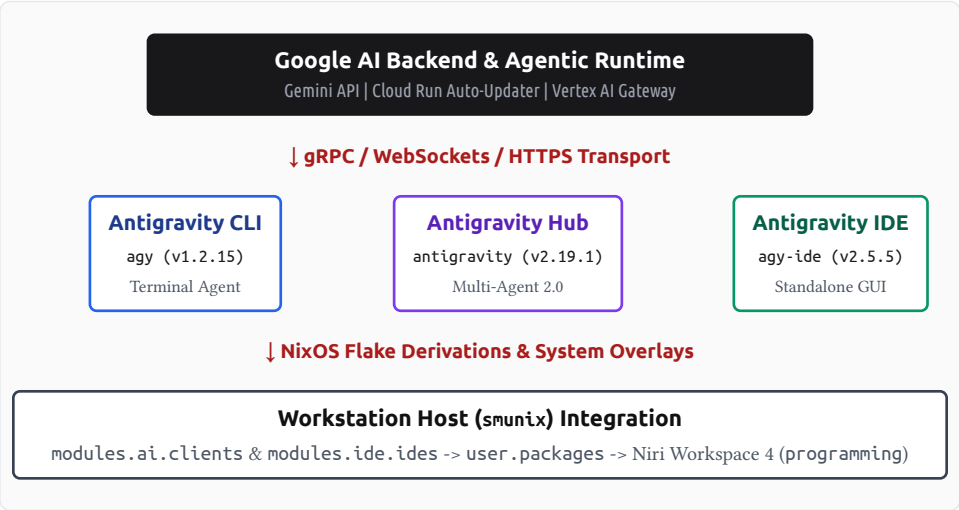

- Subagent Direct Messaging Protocol:** In version 2.17.0, communication with a child agent required routing through the parent orchestrator via `send_message`. In 2.19.1, the Hub conversation bus exposes subagent session endpoints directly to the UI input dispatcher, enabling interactive mid-flight guidance without polluting root trajectory context.
- Artifact Vector PDF Serialization:** Enhances the artifact preview pane with a native headless rendering engine that compiles Markdown, structured tables, and Mermaid/vector diagrams directly into high-fidelity PDF documents.
- Conversation-Only Non-Destructive Rollback:** Version 2.17.0 coupled turn rever- sion with filesystem reverts. Version 2.19.1 decouples LLM trajectory history from workspace disk modifications, allowing engineers to undo faulty reasoning branches while retaining working code edits.
- Sandboxing & Secret Protection:** Closed an operational gap where dotfiles (`.git`, `.env`, `.vscode`) could be accessed under passive review presets; 2.19.1 enforces mandatory explicit confirmation prompts for security-sensitive paths.

Antigravity CLI: Evolution from 1.2.11 to 1.2.15

- Heap Allocation & Event Loop Latency Reduction:** Version 1.2.15 completely refactors the terminal rendering pipeline. Frame buffer allocations are cached across render ticks, eliminating memory thrashing and stutter during high-speed token streaming.

2. **Instant Quota & Credit Failure Propagation:** Supersedes a defect where exhausted Gemini API quotas triggered repeated 2.5-minute exponential backoff retry loops; 1.2.15 validates quota headers and terminates failed turns instantly.
3. **Terminal Multiplexer Escape Sequence Sanitation:** Resolves terminal corruption in Ghostty, Kitty, WezTerm, and Zellij caused by malformed cursor-query escape sequences (Ga=q,f=32...).
4. **Global Configuration & Rule Access:** Hardens filesystem path resolution for custom rules and skills located in ~/.gemini/config/, resolving symlink recursion bugs.

Declarative Nix Packaging Specifications

Below are the exact declarative modifications required to update the repository packages to the latest upstream releases.

Updated CLI Derivation: pkgs/google-antigravity-cli.nix

```
availableSources = {
  x86_64-linux = {
    url = "https://storage.googleapis.com/antigravity-public/antigravity-cli/1.2.15-5434575321694208/linux-x64/cli_linux_x64.tar.gz"; # ❶
    hash = "sha512-bS4u7aDK1urI6LLfESV9aEIQ+N0Eou4BHcatDtrPoz4eycVUWJ9v9u8GL/TDx3e6RrboRjlxHxczd8wVVMZ0Ng=="; # ❷
  };
  aarch64-linux = {
    url = "https://storage.googleapis.com/antigravity-public/antigravity-cli/1.2.15-5434
```

```

575321694208/linux-arm/cli_linux_arm64.tar.gz"; # ❸
    hash = "sha512-GZ5kGf11Sfopb1HGA1yeAkb57N0bZiTEb/
mkFvcrC2V5mZxpLJSZ0hip+IdG1g7njQ9ZKzHI+ri+hbDUBTOZHQ=="; # ❹
  };
};

# Bump version to 1.2.15
version = "1.2.15"; # ❺

```

- ❶ Upstream build artifact URL for Linux x86_64 architecture.
- ❷ Cryptographic SHA-512 SRI hash verified against raw downloaded tarball.
- ❸ Upstream build artifact URL for Linux ARM64 architecture.
- ❹ Cryptographic SHA-512 SRI hash for ARM64 binary payload.
- ❺ Package version string aligned with internal build manifest.

Updated Hub Derivation: pkgs/google-antigravity.nix

```

availableSources = {
  x86_64-linux = {
    url = "https://storage.googleapis.com/antigravity-public/antigravity-hub/2.19.1-6046
815158665216/linux-x64/Antigravity.tar.gz"; # ❶
    hash = "sha512-LgMi1/gHJiazDwnwyQ6W45C6NSRlNzzXNuGks4WJ1v+EMe3p3qs4fzL/KJLYmf1T1/
TOKXENr5uOI+dfgYLBdg=="; # ❷
  };
  aarch64-linux = {
    url = "https://storage.googleapis.com/antigravity-public/antigravity-hub/2.19.1-6046
815158665216/linux-arm/Antigravity.tar.gz"; # ❸
    hash = "sha512-
F20TkiZs6NpqKenwrr2VlrXDNaTckswSB05hspWls687cfm4N4r0jQLK9XWd7+Nr030GDhPjGC5B0JlmfdsZeQ=="; # ❹
  };
};

# Bump version to 2.19.1
version = "2.19.1"; # ❺

```

- ❶ Google Cloud Storage public bucket URI for Antigravity 2.0 Hub (x86_64).
- ❷ Cryptographic SHA-512 SRI checksum for x86_64 Electron archive.
- ❸ Google Cloud Storage public bucket URI for Antigravity 2.0 Hub (ARM64).
- ❹ Cryptographic SHA-512 SRI checksum for ARM64 Electron archive.
- ❺ Updated package version string matching upstream changelog tag.

Actionable Remediation & Upgrade Procedure

1. Eliminate Binary Shadowing in User Profile:

```
nix-env -e google-antigravity-cli
```

2. **Apply Declarative Version Bumps:** Update `pkgs/google-antigravity-cli.nix` to 1.2.15 and `pkgs/google-antigravity.nix` to 2.19.1 using the verified SRI hashes.
3. **Rebuild and Activate System Configuration:**

```
sudo nixos-rebuild switch --flake .#smunix
```

4. **Update Subagent Execution Wrapper:** Update `~/.gemini/antigravity-cli/bin/agentapi` to dynamically dispatch via `exec agy agentapi "$@"` rather than hardcoding an ephemeral Nix store path.
5. **Verify Runtime Binaries:**

```
agy --version          # Outputs 1.2.15  
antigravity --version # Launches Hub 2.19.1  
agy-ide --version      # Retains 2.5.5
```
